I have a couple we have cut almost an inch off so they would be 12 " LOP. I can take some pictures Monday and let you know what we would sell them for.

Shel

My sister is very short, only an 11 inch LOP. Please advise, can the polymer stock be cut shorter without interfering with the built-in buffer? We understand this would involve a fair degree of craftsmanship, with hacksaw, file, drill, glue and screws. Just wanted to know if it's possible. Cheers, Gus

Hi Shel.

Thanks very much for all the suggestions. Glad to hear the lowers can, with some craftiness be shortened.

I've just shown sis, we had a chat, and we'd probably do the work ourselves, to get the maximum reduction in LoP.

So she's gonna just buy off your website when ready.

Thanks for getting back to us with all that info.  
Regards,

Gus

Another suggestion if you are into doing the shortening yourself. You can cut 1.5" measured from rear (take the butt plate off) Top rear toward the front There is enough material to support operations with a 5.56 or smaller. We have 2.5" material at the end of the buffer tube to support 45 ACP blow back.

Hope that helps.

Shel

Hello

Echo 93 has a stock cutting service for the CAV15 [http://www.echo93.com/\\_p/prd1/4273423475/product/cav-15-receiver-modification](http://www.echo93.com/_p/prd1/4273423475/product/cav-15-receiver-modification)

Its 170 dollars. I have a couple here done if you want to buy I would sell for 199 dollars which includes a stripped lower shortened by an inch (12" LOP) fitted recoil pad pivot and takedown pins and buffer detent retention roll pin.

If you want that you can call me and we can do a custom order over the phone.

Shel

Hello KE Arms,

Attached is an email chain between me and GWACS in mid-2017, regarding how to shorten one of their AR15 integral-receiver butt-stocks for use by a short person. They were extremely helpful, explaining in detail and with an internal photo how the work would be done. They also advocated another business that routinely did stock shortening on their receivers.

Suffice to say, our interaction provided me with sufficient knowledge to safely modify one of their AR15 lowers, due to my gained understanding of how the receivers were constructed. I know, for example, that the receiver only needs 1.5 inches of material after the buffer tube to support 5.56mm ammunition, and that there's an internal 'firewall' at that exact measurement.

Please advise if you need anything else.

Regards,

Angus Anderson

Cool attached is a picture of the inside with a ruler. Please don't post this on any public site. I am providing you this so you can succeed with the chop. There is 3 inches of buffer stop you only need half of that for 5.56.

Shel
